About Us

We are reforming graduate education in Armenia in support of the Green Deal and SDGs, enabling the shift from traditional to future-oriented, green and interdisciplinary curricula, as well as promoting student mobility and designing collaborative degree implementation schemes.

GREEN

TRANSFORMING GRADUATE EDUCATION FOR A GREEN AND SUSTAINABLE FUTURE

PROJECT SUMMARY

The T-GREEN project aims to address the need for reform in graduate education within Armenia. This reform is intended to align with the Green Deal and facilitate the transition from conventional to forward-looking, environmentally conscious, and interdisciplinary curricula. The project also seeks to foster student mobility and create collaborative approaches to implementing degree programs.

At the core of this project lies the capacity building of national and institutional administrators, decision-makers, policy implementers, educators, researchers, and students. The primary focus is on integrating Sustainable Development Goals related to environmental concerns into policies and educational content.

An additional pivotal goal of the project involves establishing a network that encompasses national authorities, Higher Education Institutions (HEIs), and other stakeholders. This network will promote both horizontal and vertical collaboration. To achieve this, national and institutional regulations that encourage joint, dual, or multiple degree programs and support student mobility, credit transfer, and recognition will be refined and tested.

REGIONAL PRIORITY

The integration of sustainable content into education complements the regional priority of structural reforms aimed at promoting and supporting mobility initiatives. These reforms include creating a recognition and credit transfer system akin to the Erasmus+ KA1 system in Armenia. The project also involves piloting interdisciplinary collaborative educational programs.

WORK PACKAGES

Package 1 - Capacity Building

Package 2 - Development of national documents for ESD

Package 3 - Development of 2 degrees

Package 4 - Development of green MA degrees

Package 5 - Project QA of Monitoring

Package 6 - Awareness raising

Co-funded by the European Union
